Manfred Rosenstatter, General Manager

Systematic Solutions

ALUMERO was founded in 1992 with a clear business objective – to create a flexible, powerful company with extensive experience in the fields of metal production and service that provides its clients with optimized custom solutions.

We have been pursuing this objective consistently and effectively with the help of our highly motivated team of dedicated employees. Today, ALUMERO ranks among the foremost providers of customized solutions in the industry. Our expertise and comprehensive client and project consultation services allows us to offer excellent product quality, innovative production options and a perfect aligned project execution.

Design, development and construction

ALUMERO creates long-term solutions based on innovative ideas. We apply our comprehensive knowledge of products and production methods to all aspects of design and development. This enables us to offer cost-optimized product planning resulting in well-thought-out, functional design solutions and an economical and efficient use of equipment.

Production facilities in Chorzow (Southern Poland) und Helmond (Netherlands)

Our production facilities provide cost-effective product planning, consistently high product quality and reliable delivery schedules.

Quality is no accident

ALUMERO's quality management program safeguards the company's professionalism and international reliability now and in years to come. Within the company, successful project management is based on our reliable "Systematic Solutions" program.

Thus durable quality is a direct result of our elaborate company philosophy, backed up by ISO 9001:2000 standards and Technical Control Board (TÜV – Technischer Überwachungsverein) inspections.

Aluminium – the "green" metal

About 8 % of the earth's crust is made up of different types of aluminium compounds. That makes aluminium one of the few raw materials with an almost unlimited supply.

Because of its material properties Aluminium has low environmental impact, and it can be used time and time again for the same purposes. The recycling of aluminium only requires 5 % of the original energy input.

Comprehensive customer service

Our comprehensive customer service program starts with an objective up-front consultation and incorporates everything from innovative solutions, to cost-efficient automated production and assembly group manufacturing, to customized packing and shipping.

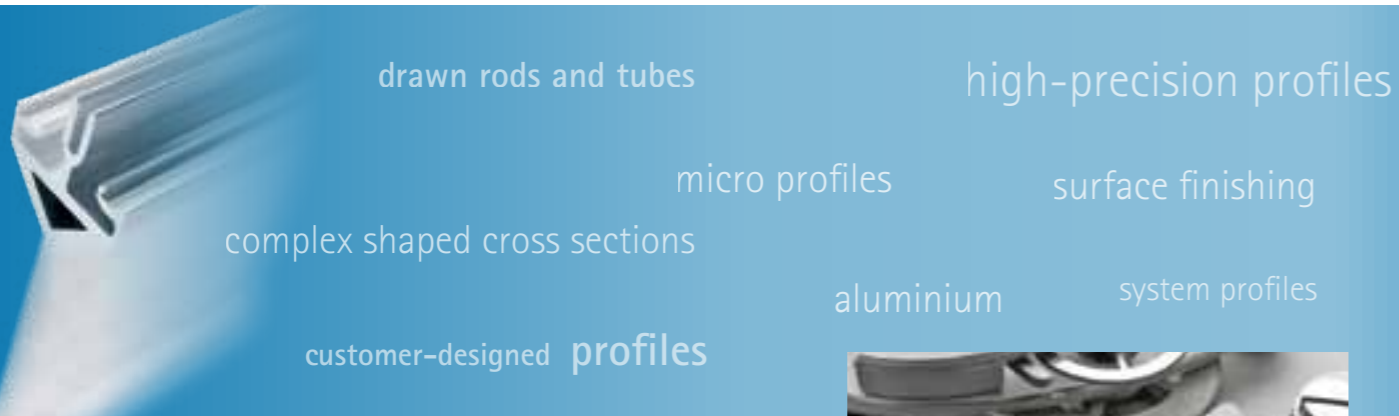

The extensive customer information section at www.alumero.at is an additional, integral component of our service portfolio.

Let's talk about your individual "Systematic Solution" – we look forward to hearing from you!

ALUMERO EXTRUSIONS

ALUMERO FINEX extrusions Production Plant, Die Niederlande

The right profile for every requirement

ALUMERO extrusions aims to develop the best, most cost-effective solution for each specific task and requirement. To be successful, the correct layout of the pressing tools is as important as choosing the right alloy and extrusion speed.

In all areas, special attention is paid to on-time, professional project execution as well as maximum product quality. ALUMERO's employees see themselves first and foremost as project managers whose job is to keep track of the overall project in addition to carrying out their individual tasks.

Our 500 t to 3,500 t presses meet every requirement for complex profile sections made with a high degree of precision according to EN 755-9 and/or EN 12020-2.

The application of ALUMERO extruded profiles extends from micro-profiles for medical engineering, to industrial profiles for shutters and sunblinds, to precision profiles for refrigeration units and Automotive industry – from prototypes to series.

High-precision micro profiles

Aluminium profiles for Automotive Industry

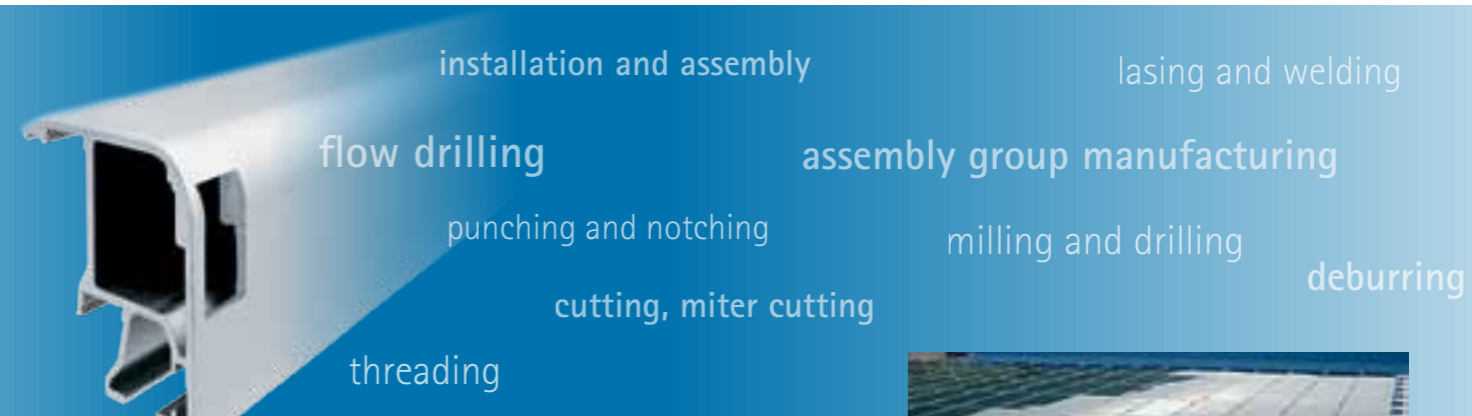

Profiles of all types for a variety of uses

Various types of customized surface finishes

ALUMERO METAL COMPONENTS

ALUMERO Metal Components Production Plant, Poland

Perfect form and function

The exact mechanical processing of aluminium and metal products requires a high degree of precision and expertise. This is true for aluminium profile technology as well as for photovoltaic and solar module frame technology, glass fronts for kitchen cabinets, welding and flexural units, stamped components used in industrial technology, sectional frame assemblies, and complex assemblies for doors and signage.

New applications for aluminium components are added every day in the field of automotive parts manufacturing, where the material's low weight and noble appearance play an important role.

All this requires experience using ultra-modern computerized equipment, which is as important to a smooth manufacturing process as comprehensive knowledge of the materials used.

ALUMERO's aluminium profile technology offers the best and most economical solutions for all your needs, from design to product development to finished product.

Photovoltaic and solar module frame technology

Furniture and kitchen components

Machining of special profiles, e.g. refrigeration units

Fabrication of individual assemblies

AKOTHERM profile system

window, door and cladding components

sun protection systems

ALUMERO Bond

sheet-metal structures

small steel structures

fireproofing components

welded structures

UFA-Palast Dresden, individual post-and-beam construction

Reichsbrücke, Vienna, ALUMERO Bond composite panels

Knittelfeld Hospital, sun protection systems

Aachen Museum, windows and doors, façade system

transparent glass elements

plantable elements

aluminium noise protection panels

Aluminium cladding

sophisticated hybrid designs

different styles

Noise protection wall with glass panels and digital design

Curved noise barriers

Hybrid design (aluminium and plantable steel elements)

Combined glass and aluminium design

The symbiosis of technology and art

Every era has its characteristic architectural style as well as its special materials. It's difficult to imagine modern exterior construction without aluminium – thanks to its excellent structural-physical properties and wide range of artistic and aesthetic possibilities. Take, for example, the use of aluminium in post-and-beam construction, where it adds sparkle – literally! – to a wide variety of architectural exterior solutions.

Durability, weather resistance and low maintenance are some of the special distinguishing characteristics of aluminium. When used in composite profile window systems, for example, aluminium's ultra-low weight and high thermal insulation value contribute considerably to lower energy costs and also improve the indoor climate. Guaranteed.

Whatever the task, ALUMERO's project specialists will use their expertise and an ongoing dialogue with the customer to find the most efficient and economical solution.

ALUMERO noise protection walls

Constant noise has a negative effect on our health and well-being. New residential areas, even entire business or industrial parks often sprout up within a few years. Expanded access roads add further to their appeal. Those living along the thoroughfares often fall by the wayside.

We manufacture state-of-the-art noise protection walls that meet the highest technical requirements. We offer a wide variety of designs, including different types of aluminium panels, transparent glass and plantable elements and sophisticated hybrid designs, to fit any type of landscape.

Acoustic screens "Alumero" are applicable also in military objects like air bases, installations ect. They fulfill conditions of noise protecting but can be simultaneously a defensive architecture element.

ALUMERO Noise Protection reduces noise pollution and increases your quality of life!
